# VBT Exchange Platform
## Coin Mining Economic Model

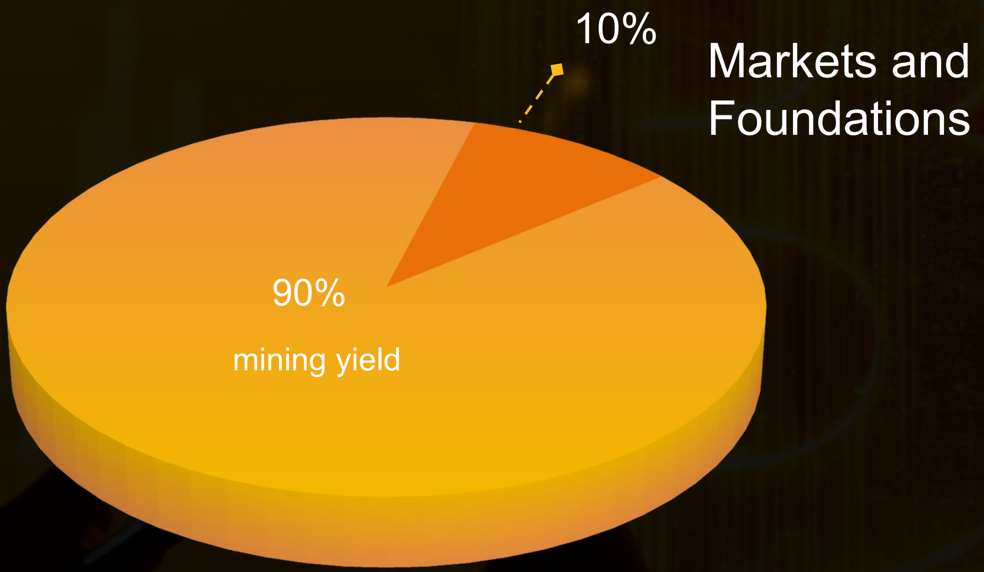
Double Digging Mode · Deflation Mechanism · Gold Standard · Community Incentive · Node Ecology

Https://www.vebit.io

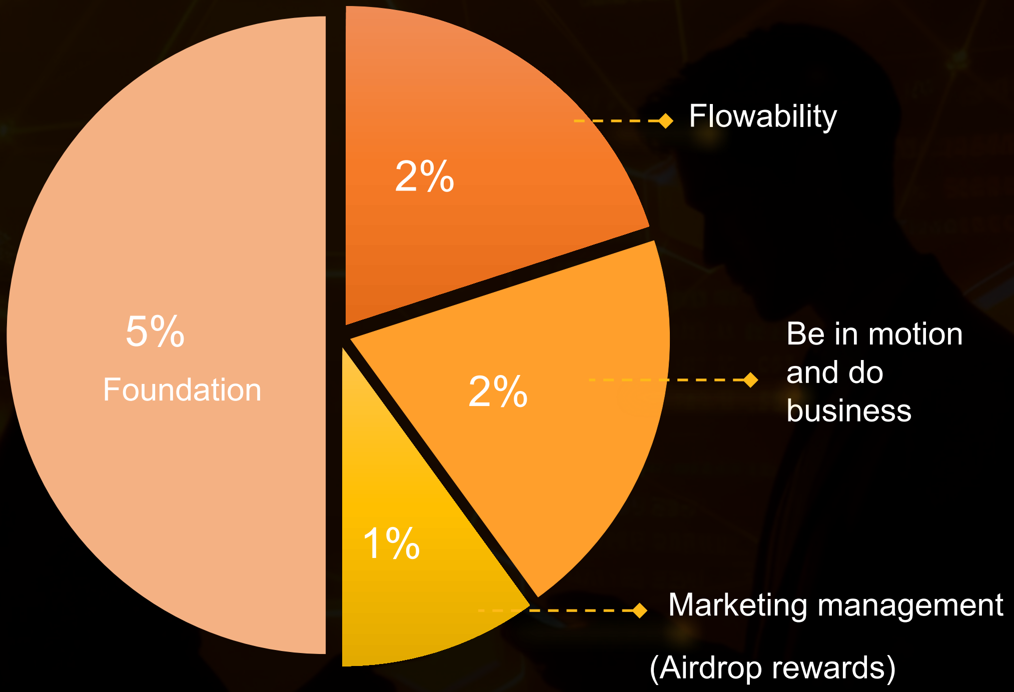
## Overview of Platform Coins

Token Name: VBT Total Issuance: 1 billion

Distribution mechanism: 90% of mining output goes to the market and 1 0% to the foundation



general distribution mechanism



Markets and Foundations

# Registration and Participation Mechanism of Mining Machine

## Reporting structure

Mining machine participation method (choose one of two)

(1) 400U VBT tokens + 100U UP + 100U USDT

(2) 400U VBT tokens + 100U OTM tokens + 100U USDT

**— UP is an ecosystem token designed to support the mining ecosystem**

— 100U UP allocation ratio:

10% injected into the exchange

90% destroyed

## End-of-life policy

Once the mining rig count reaches 60,000 units, 90% of the collected VBT tokens will be burned, with the remaining 10% allocated to market-making.

**Participate in restrictions**

Each account can purchase up to 20 mining machines

Each mining machine operates on a "gold standard" mechanism, with triple elimination.

## daily output mechanism

| Daily platform output | superior limit | proportion |
|---|---|---|
| gross output | 500,000 VBT | 100% |
| POS income | 300,000 VBT | 60 % |
| Community Contribution Rewards | 150,000 VBT | 30% |
| Node bonus reward | 5 ten-thousand VBT | 10% |

**Notes**

**When the mining equipment reaches 60,000 units, it attains the equilibrium peak.**

**POS revenue plus community contribution rewards total 500,000.**

**Before reaching 60,000 units,**

**Each POS machine produces 5 VBTs.**

Daily platform output limit: 500,000 VBT per day

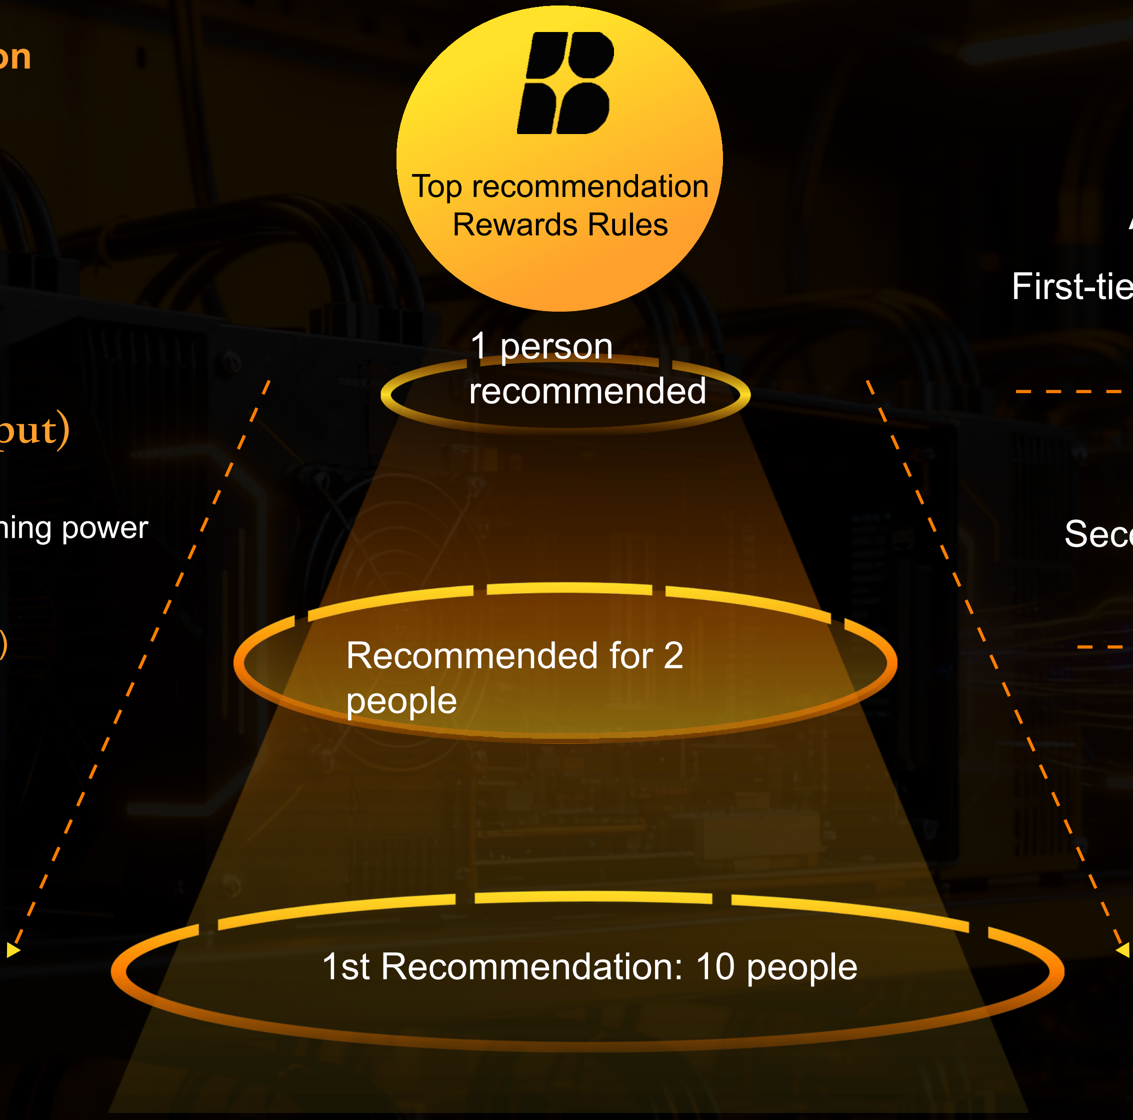
## revenue mechanism description

### POS earnings (mining machine output)

Generate revenue based on the proportion of mining power users hold
60% of daily POS output is available
(POS output accounts for 60% of the total output)

### Community Contribution Rewards (Team Fission Rewards)

Calculate community contribution rewards based on direct push levels



Acquire
First-tier income × 5%

Acquire
Second-tier income × 5%

Acquire
10th layer income × 5%

You can earn a total of 10 layers of 5% community contribution rewards

## Node dividend incentive mechanism

The node bonus reward system has 5 levels, and users can automatically advance based on their node size.

| Grade | Node size condition | Maximum daily output | Dividend ratio | Mode of distribution |
|---|---|---|---|---|
| V1 | ≥ 200 mining machines | 20,000 pieces | 4 0% | weighted dividend |
| V2 | ≥ 500 mining machines | 15,000 pieces | 30% | weighted dividend |
| V3 | ≥ 1,000 mining machines | 8,000 pieces | 16% | weighted dividend |
| V4 | ≥ 2000 mining machines | 5000 pieces | 10% | weighted dividend |
| V5 | ≥ 5000 mining machines | 2000 pieces | 4% | weighted dividend |

Node dividend rewards are distributed based on the number of accounts in the pool, with weighted allocation.
Add a node to reach 1,000 mining machines, and you can randomly draw NFT reward cards from the exchange to enjoy its dividends. Reach 5,000 nodes, and you will receive NFT reward cards.

# Section Two:

## Transaction Mining Mechanism

# Transaction mining mechanism

## Fee rebate mechanism

1.The platform transaction fee is 0.2% (two per thousand).

2.Mining rewards are returned at 6 times the transaction fee

Note: All points from POS revenue and community contribution rewards are credited to your personal account daily. The system releases 0.05% of total points each day, which can be redeemed for platform coins at real-time rates.

## Yield multiplier design

| Revenue Type | Enlargement factor |
|---|---|
| POS income | 3 times |
| Community Contribution Rewards | 2 times |
| Node bonus reward | 1x |

Advance 1 to level 1, advance 10 to level 10
The system is the same as the mining equipment sector.

## Trading mining pool

| Dividend pool tier | Node transaction flow (daily) | dividend ratio | Personal transaction flow requirements | Mode of distribution |
|---|---|---|---|---|
| Dividend Pool 1 | ≥ 500,000 U | 50% | ≥ 100 0U | Weighted dividend |
| Dividend Pool 2 | ≥ 20 million U | 30 % | ≥ 200 0U | Weighted dividend |
| Dividend Pool 3 | ≥ 50 million U | 20% | ≥ 500 0U | Weighted dividend |

## Summary of comprehensive income

### transaction mining income
### Zoom in 6x by condition

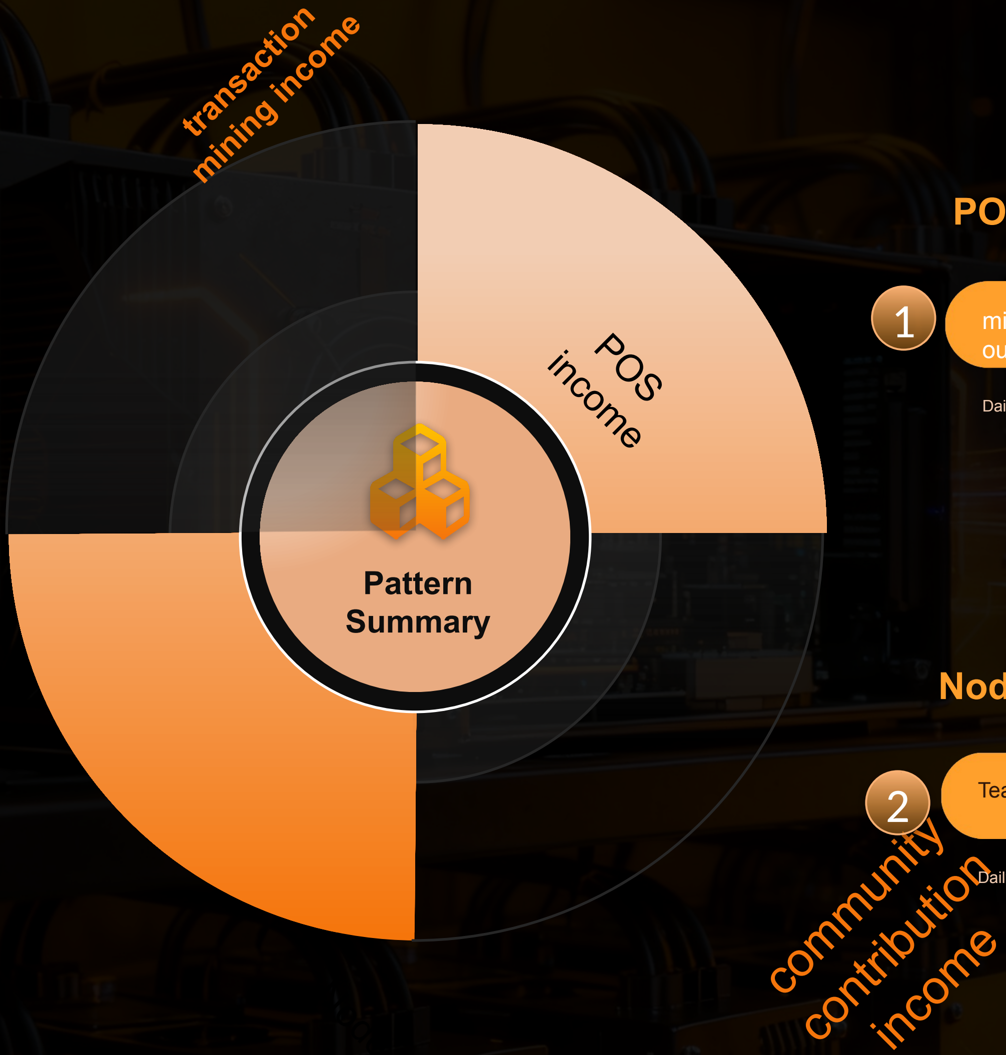
4 Reimbursement of handling fee increase

Daily distribution

### Node bonus reward 10%

3 Team volume

Daily distribution



### POS income 60%

1 mining machine computing power output

Daily distribution

### Node bonus reward 30%

2 Team Fission

Daily distribution

# Model Highlights

## double excavation model

Dual-channel revenue of mining machine mining and transaction mining

## deflationary mechanism

80% of VBT destroyed after peak of mining machine boosting the steady rise of the currency

## gold standard

Triple Out to Prevent Bubble Accumulation

## Model Highlights

## multi-tier incentive system

The 10th generation of fission activates team growth

## multiple dividend pool

Node growth is promotion
Create a long-term incentive loop

## fee backflow

Trading is mining, the ecosystem is self-circulating
